

# Using Lua<sup>A</sup>T<sub>E</sub>X to typeset RTL text with reledpar

## Abstract

This file provides an example on how to use reledpar and Lua<sup>A</sup>T<sub>E</sub>X to typeset a right to left text with its translation on the facing page<sup>1</sup>.

As you can see, the switch to RTL convention is made *before* the `pstart`. It must be also called inside `\eledsection`.

For an example with X<sub>Y</sub><sup>A</sup>T<sub>E</sub>X, look at parallel-column-two-languages.tex file.
