1 Introduction

In some scholar fields, like history or philology, we have to work with anonymous work. This package provides facility to manage them with biblatex, with citation and bibliography style of the verbose family.

2 What does the package do?

This package does those things:

1. Providing a sorting scheme to put all anonymous work at the beginning of a bibliography. This sorting scheme is derivated from nyt scheme.
2. For @book, @bookinbook, @bookinarticle, @mvbook, @inbook:
 - Changing label name to author only, never editor.
 - For French, changing “dir.” by “éd.”
3. For @book, printing only the author name before the title, and never the editor, even if the book is anonymous. If you need to print an editor name when a book has no author, you should use @collection or @proceedings Entry Type.

3 Using the package

3.1 Loading

You must load the package after biblatex package:

```
\usepackage[...]{biblatex}  
\usepackage{biblatex-anonymous}
```

3.2 Sorting with anonymous scheme

If you want your bibliographies to have all anonymous works at the beginning, you can pass option `sorting=anonymous`:

- To `biblatex` package, to apply it to all bibliographies.
- To `\printbibliography` command, to apply it to a single bibliography.

4 Credits

This package was created for Maïeul Rouquette's phd dissertation¹ in 2014. It is licensed on the *LaTeX Project Public License*².

Its code was explained before (in French) on Maïeul Rouquette website³.

All issues can be submitted, in French or English, in the GitHub issues page⁴.
